

Instructions:

This sheet will autopopulate as you fill in information on the 'ORIGINAL' sheet.

Note that some cells will say #DIV/0. If this happens, it means there is not a value in place to divide by, for example we cannot compare the risk ratio to white students if no white students have been suspended or if you nave questions about this sheet, please contact Emily Schaldach at eschaldach@unr.edu. If you have questions about how to implement changes in your school based on this data, please contact your MTSS

Definitions:

Risk Index- percentage of a group that receives a suspension or

Risk Ratio- represents the likelihood of a suspension or expulsion for one group in in relation to a comparison group

Risk index of target group / risk index of comparison group = risk

Notes:

Risk Ratio - boxes highlighted in RED indicate a student group that has an above average chance of a suspension or expulsion (compared to all students or compared to white students)

Risk Ratio Comparison Graphs - Negative values indicate student population has a lower chance of a suspension or expulsion than comparison group (either all students or white students) Positive values indicate student population has a higher chance of a suspension or expulsion than comparison group
